

ABSTRACT

The present invention relates to an anti-tumor agent containing a tubulin polymerization-inhibitory active substance and an anti-inflammatory active substance. The present invention also relates to an anti-tumor pharmaceutical preparation containing one or
5 more tubulin polymerization-inhibitory active substance and/or anti-inflammatory active substance, which can be individually combined with one or more additional tubulin polymerization-inhibitory active substance and/or anti-inflammatory active substance. The present invention also relates to methods and therapeutic regimens for administering the same to a subject in need thereof.
